

[22] CC- Develop an Apex program that sends an **email notification** to a specified email address using Salesforce email services. The program should define the recipient email, subject, and message body, and send the email (with /without Attachment) using the built-in messaging class. Give the appropriate message on invalid email id (with **frontend using visualforce pages**)

<https://github.com/4SNA/salesforce-email-notification>

[21] CC- Develop an console based Apex program that sends an email notification to a specified email address using Salesforce email services. The program should define the recipient email, subject, and message body, and send the email using the **built-in messaging class**. (with /without Attachment)

<https://github.com/4SNA/apex-console-email-sender>

[7] [12] Design and deploy a **static website on a cloud virtual machine/Instance**. Configure the server and networking settings so that the website is publicly accessible and can be updated remotely

<https://github.com/4SNA/static-website-ec2/tree/main> – nginx

<https://github.com/vedbabar/Static-Website-EC2> – apache

[8] CC- Secure File Sharing Between Cloud Instances Create a cloud-based environment where two virtual machines communicate securely within a virtual network. Implement a mechanism to transfer files between the instances while ensuring proper access permissions.

<https://github.com/ruchir07/File-Transfer-LP2/tree/main>

[11] CC- Deployment of an E-Commerce Web Application (Full Stack MERN Application)
Deploy a sample e-commerce application on a cloud virtual machine. Configure the backend services and database so that users can browse products and simulate basic purchase functionality.

<https://github.com/ruchir07/ecommerce-app-LP2/tree/main>

[9] CC- Online Blog Application Deployment Deploy a full-stack blog application (frontend, backend, and database) on a cloud platform. Configure the server environment so that users can create, view, and manage blog posts through a web interface.

<https://github.com/vedbabar/Blog-app-LP-2>

[10] CC- Cloud-Based Student Record Management System Deploy a web application that stores and manages student records using a database and backend API. Deploy the frontend interface and ensure users can perform operations such as adding, updating, and retrieving student data.

<https://github.com/ruchir07/Student-Record-Management-System-LP-2/tree/main>

[13] CC- MERN-Based Task Management Application Deploy a MERN-based task management system where users can create, update, and delete tasks. Ensure the frontend communicates with the backend API and the database is hosted properly.

<https://github.com/ruchir07/Task-Manager-LP2>

[14] CC- Cloud-Based To-Do List Manager (Full Stack Mern Application) Deploy a task management application that allows users to create, update, and delete tasks. Configure the application so that it stores data in a backend database hosted on the cloud.

<https://github.com/ruchir07/Task-Manager-LP2>

[15] CC- Online Event Registration System (Full Stack Mern Application) Deploy a web application where users can register for an event by submitting their details, which are stored in a cloud-hosted database.

https://github.com/ruchir07/Event-Registration_LP2

[16] CC- Student Record Management System Develop an application in Salesforce using the Apex programming language and visual force page to manage student records (Name, Roll No, Class, Mobile No) stored in a custom object.

<https://github.com/vedbabar/Student-Record-Management-System---Salesforce>

[17] CC- Employee Management System Develop a menu-driven Employee Management System that manages employee records (Emp ID, Emp Name, email, birth date, Department) in Salesforce using console based.

<https://github.com/vedbabar/Employee-Management----Salesforce>

[23] - CC- Develop a College Management Lightning Application to store and manage student and faculty records. The system should ensure data accuracy using validation rules while creating or updating records. The system should validate the following before saving:

<https://github.com/ruchir07/College-Management-Lightning-App>
